Subject :-

Programming Fundamentals

Project Proposal: Cafe Management System using Python

Submitted as a University Mini Project Proposal

1. Introduction

The Cafe Management System is a simple Python-based mini project designed to automate basic cafe operations such as greeting customers, taking orders, calculating bills, and displaying the final amount. The project uses basic Python programming concepts including variables, loops, conditional statements, functions, and user input handling.

2. Problem Statement

Small cafes and beginner businesses often manage customer orders manually, which can lead to calculation mistakes and inefficient service. This project provides a simple digital solution to improve order management and billing.

3. Objectives

- To develop a basic cafe ordering system using Python.
- To understand the implementation of conditional statements and loops.
- To calculate customer bills automatically.
- To improve programming and problem-solving skills.

4. Features of the System

- Greets customers when the program starts.
- Displays a menu of cafe items.
- Accepts customer orders.
- Calculates total bill automatically.
- Shows the final order summary.

5. Technologies Used

Programming Language: Python

Platform: VS Code / PyCharm / IDLE

Concepts Used: Variables, Functions, Loops, Conditional Statements, Input/Output

6. Methodology

The system works through a command-line interface. When the program starts, it greets the customer and displays a menu. The user selects items and enters the quantity. The system stores the order details, calculates the total bill, and displays the final receipt to the customer.

7. Scope of the Project

This project can be expanded in the future by adding a graphical user interface (GUI), database storage, payment integration, customer records, and inventory management.

8. Expected Outcome

The final system will provide a simple and efficient cafe ordering and billing solution while demonstrating the practical use of Python programming concepts.

9. Conclusion

The Cafe Management System is a beginner-friendly Python project that helps students understand real-world applications of programming. It improves logical thinking and provides experience in creating small management systems.
